The percentage reduction in $E_f$ due to 12 days of refrigeration at $4^\circ C$ is reported incorrectly in the text of both the Abstract and the Results (Sec. 3.2) [1]. The published text states that $E_f$ is reduced to $3.1 \pm 41.3\%$ of control values: “...$E_f$ to $3.1 \pm 41.3\%$ of control values, $p=0.046$...” (p. 064502-1), and “By day 12, $E_f$ decreased to $3.1 \pm 41.3\%$ (mean $\pm 95\%$ CI)” (p. 064502-3). Please note that the decimal point is incorrectly placed, and $E_f$ was in fact reduced to $31.3 \pm 41.3\%$ of control values. This percentage is consistent with the reduction in $E_f$ illustrated in Fig. 3(c) [1].
