## License Agreements

ASME's license agreement is a legally binding document protecting the rights of our institutional customers and ASME. Addendums may be used to add additional publications to an agreement, extend the license period, or incorporate policy changes when required.

ASME's license agreement includes terms requested by libraries and research centers from the academic, corporate, and government sectors. Agreements have been developed to protect the rights of our customers and to grant rights to use content in ways specific to an electronic resource while maintaining the access rights typical of a traditional print resource.

The license agreement outlines the contract details, including but not limited to:

- **Licensed material** – content accessible to the customer's authorized users under the license agreement
- **Access details** – identified Institutional Administrator and targeted IP range
- **Time period** – start and end dates of the site license access period
- **License fee** – total price for access to all licensed material for the access period
- **Terms** – interpretation of the agreement, including usage rights and restrictions, terms and warranties, and customer service contacts and accessibility
- **Prohibitions** - defines what the Subscriber or Authorized Users cannot do with the licensed content
- **Parties** - The Agreement must be signed by both parties

The current version of the ASME Institutional License can be found at: [asme.org/shop/journals/subscriptions](http://asme.org/shop/journals/subscriptions)
